**2011 data is not comparable

As at 31 December 2013 the capital adequacy ratio amounted to 12.86% vs. 14.46% at the end of December 2012. The decrease in adequacy ratio compared to December 2012 was mainly due to the planned repayment of a subordinated loan in the amount of EUR 60 million in January 2013 as well as the increase in the capital requirement for credit risk due to the increase of receivables from customers.

On 11 July 2013 the Polish Financial Supervision Authority approved an updated Recovery Programme for BNP Paribas Bank Polska S.A.

In the updated Programme approved by the Polish Financial Supervision Authority new principles regarding financial forecasts for 2013-2014 were adopted in order to account for the economic slowdown and faster reduction of interest rates by Monetary Policy Council than expected. According to the Polish Financial Supervision Authority full implementation of the Programme should enable the Bank to generate positive financial results and improve key financial and economic indicators and complete the implementation of recovery proceedings within previously stipulated time limit, i.e. by 31 December 2014.

In our opinion, the results of the audit of the Bank's financial statements as at 31 December 2013, the analysis of the above presented ratios as well as all the information available to us as at the date of preparing this report and the opinion, do not present any threat to the Bank's ability to continue as a going concern over the 12 months from the cut- off date.
